

Data Card

Source and scope: the competition dataset contains 380 labelled training complaints and 160 unlabelled test complaints. Training rows include ComplaintId, text, Category, and FamilyId; test rows include ComplaintId and text.

The data was supplied by the ComplaintSense Kaggle competition. FamilyId is used only for grouped validation. The project uses no external user data.

Limitations: the dataset is small and template-like, so results may not generalise to real support traffic, other languages, or changing product vocabulary. The model must not make irreversible customer decisions without human review.
